

Alemeno Frontend Internship Assignment

Visual Marker Detection Project

Submitted By: Manikesh Kumar

Project Overview

This project focuses on implementing a Visual Marker Detection system for identifying and processing visual markers efficiently within a mobile application environment.

The application demonstrates:

- Marker detection using computer vision techniques
- Real-time camera integration
- Efficient frontend implementation
- Android APK deployment
- Technical documentation of the complete approach

Github Repository

Public Github Repository:

https://github.com/Manikeshmk/Visual_Marker_detection

APK Availability

The APK file is available in the first line of the Github repository README.

Technical Approach Document

Technical approach PDF:

https://github.com/Manikeshmk/Visual_Marker_detection/blob/main/TECHNICAL_APPROACH.pdf

Features Implemented

- Visual marker recognition
- Camera frame processing
- Frontend UI integration
- Android application packaging
- Documentation of architecture and implementation strategy

Technologies Used

- Android Development
- Frontend UI Components
- Computer Vision Techniques
- Github for Version Control

Conclusion

The project successfully demonstrates the implementation of a Visual Marker Detection application with a clean frontend structure, APK deployment, and proper technical documentation.

Thank You
